May 12, 2026

1. 取 $\lambda = 0$, 本征值问题转化为定解问题

$$\begin{cases} \rho \frac{d}{d\rho} \left[\rho \frac{dR(\rho)}{d\rho} \right] - R(\rho) = 0 \\ R(a) = 0 \quad R'(b) = 0. \end{cases}$$

令 $x = \ln \rho$, $R(\rho) = u(x)$, 方程化为

$$\left(\frac{d^2}{dx^2} - 1 \right) u(x) = 0.$$

不难发现定解问题的解应当具有形式

$$R(\rho) = C_1 \rho + C_2 \rho^{-1}.$$

然而在该定解问题相应的边界条件下求解系数 C_1 和 C_2 均得 0, 故在 $\lambda = 0$ 时不存在非零解。故 $\lambda = 0$ 不是该本征值问题的本征值。

2. 根据 Neumann 函数的定义, 对方程 $N_\nu(x) \sin \nu\pi = \cos \nu\pi J_\nu(x) - J_{-\nu}(x)$ 左右两边分别关于参数 ν 求导得到

$$\sin \nu\pi \frac{\partial N_\nu(x)}{\partial \nu} + \pi \cos \nu\pi N_\nu(x) = -\pi \sin \nu\pi J_\nu(x) + \cos \nu\pi \frac{\partial J_\nu(x)}{\partial \nu} - \frac{\partial J_{-\nu}(x)}{\partial \nu}. \quad (2.1)$$

对式 (2.1) 继续求导得到

$$\begin{aligned} \sin \nu\pi \frac{\partial^2 N_\nu(x)}{\partial \nu^2} + \pi \cos \nu\pi \frac{\partial N_\nu(x)}{\partial \nu} - \pi^2 \sin \nu\pi N_\nu(x) + \pi \cos \nu\pi \frac{\partial N_\nu(x)}{\partial \nu} \\ = -\pi \sin \nu\pi \frac{\partial J_\nu(x)}{\partial \nu} - \pi^2 \cos \nu\pi J_\nu(x) + \cos \nu\pi \frac{\partial^2 J_\nu(x)}{\partial \nu^2} - \pi \sin \nu\pi \frac{\partial J_\nu(x)}{\partial \nu} - \frac{\partial^2 J_{-\nu}(x)}{\partial \nu^2}. \end{aligned}$$

取 $\nu = 0$, 有

$$2\pi \frac{\partial N_\nu(x)}{\partial \nu} \Big|_{\nu=0} = -\pi^2 J_0(x) + \frac{\partial^2 J_\nu(x)}{\partial \nu^2} \Big|_{\nu=0} - \frac{\partial^2 J_{-\nu}(x)}{\partial \nu^2} \Big|_{\nu=0}.$$

不难发现

$$\left. \frac{\partial^2 \mathbf{J}_{-\nu}(x)}{\partial \nu^2} \right|_{\nu=0} = \left. \frac{\partial^2 \mathbf{J}_{\nu}(x)}{\partial \nu^2} \right|_{\nu=0},$$

即得到

$$\left. \frac{\partial \mathbf{N}_{\nu}(x)}{\partial \nu} \right|_{\nu=0} = -\frac{\pi}{2} \mathbf{J}_0(x). \quad (2.2)$$

3.(1) 将待求积分记为 $f(n) = \int_0^x x^n \mathbf{N}_n(x) \cos x \, dx$, 考虑 $f(n+1)$:

$$\begin{aligned} f(n+1) &= \int_0^x x^{n+1} \mathbf{N}_{n+1}(x) \cos x \, dx \\ &= x^{n+1} \mathbf{N}_{n+1}(x) \sin x \Big|_0^x - \int_0^x x^{n+1} \mathbf{N}_n(x) \sin x \, dx \\ &= x^{n+1} \mathbf{N}_{n+1}(x) \sin x + x^{n+1} \mathbf{N}_n(x) \cos x \Big|_0^x - \int_0^x \frac{d}{dx} [x^{2n+1} x^{-n} \mathbf{N}_n(x)] \cos x \, dx \\ &= x^{n+1} \mathbf{N}_{n+1}(x) \sin x + x^{n+1} \mathbf{N}_n(x) \cos x - \int_0^x [(2n+1)x^n \mathbf{N}_n(x) - x^{n+1} \mathbf{N}_{n+1}(x)] \cos x \, dx \\ &= x^{n+1} \mathbf{N}_{n+1}(x) \sin x + x^{n+1} \mathbf{N}_n(x) \cos x - (2n+1)f(n) + f(n+1). \end{aligned}$$

因此我们得到

$$f(n) = \int_0^x x^n \mathbf{N}_n(x) \cos x \, dx = \frac{x^{n+1} \mathbf{N}_{n+1}(x) \sin x + x^{n+1} \mathbf{N}_n(x) \cos x}{2n+1}.$$

其中利用了递推关系和 Neumann 函数在 $x \rightarrow 0$ 处的渐近展开

$$\mathbf{N}_n(x \rightarrow 0) \sim -\frac{\Gamma(n)}{\pi} \left(\frac{x}{2}\right)^{-n}.$$

(2) 类似上题, 有

$$\begin{aligned}
 f(n+1) &= \int_0^x x^{n+1} J_{n+1}(x) \sin x \, dx \\
 &= -x^{n+1} J_{n+1}(x) \cos x \Big|_0^x + \int_0^x x^{n+1} J_n(x) \cos x \, dx \\
 &= -x^{n+1} J_{n+1}(x) \cos x + x^{n+1} J_n(x) \sin x \Big|_0^x - \int_0^x \frac{d}{dx} [x^{2n+1} x^{-n} J_n(x)] \sin x \, dx \\
 &= -x^{n+1} J_{n+1}(x) \cos x + x^{n+1} J_n(x) \sin x - \int_0^x [(2n+1)x^n J_n(x) - x^{n+1} J_{n+1}(x)] \sin x \, dx \\
 &= -x^{n+1} J_{n+1}(x) \cos x + x^{n+1} J_n(x) \sin x - (2n+1)f(n) + f(n+1).
 \end{aligned}$$

得到

$$f(n) = \frac{x^{n+1} J_n(x) \sin x - x^{n+1} J_{n+1}(x) \cos x}{2n+1}.$$

其中利用了递推关系和 Bessel 函数在 $x \rightarrow 0$ 处收敛。

(3)

$$\begin{aligned}
 \int_0^x x^3 J_0(x) \, dx &= x^3 J_1(x) \Big|_0^x - \int_0^x 2x^2 J_1(x) \, dx \\
 &= x^3 J_1(x) - 2x^2 J_2(x) \Big|_0^x \\
 &= x^3 J_1(x) - 2x^2 J_2(x).
 \end{aligned}$$

(4) 利用上题结论, 有

$$\begin{aligned}
 \int_0^x x^3 J_0(x) \ln x \, dx &= [x^3 J_1(x) - 2x^2 J_2(x)] \ln x \Big|_0^x - \int_0^x [x^2 J_1(x) - 2x J_2(x)] \, dx \\
 &= x^3 J_1(x) \ln x - 2x^2 J_2(x) \ln x - x^2 J_2(x) \Big|_0^x - 2x J_1(x) \Big|_0^x + 4 \int_0^x J_1(x) \, dx \\
 &= x^3 J_1(x) \ln x - 2x^2 J_2(x) \ln x - x^2 J_2(x) - 2x J_1(x) - 4 J_0(x) \Big|_0^x \\
 &= 4 - 4J_0(x) + (x^2 \ln x - 2)x J_1(x) - (2 \ln x + 1)x^2 J_2(x) \\
 &= 4 + (2x^2 \ln x + x^2 - 4)J_0(x) + (x^2 \ln x - 4 \ln x - 4)x J_1(x).
 \end{aligned}$$

(5) 利用 0 阶 Bessel 函数的级数表示及其一致收敛性：

$$\begin{aligned} \int_0^t J_0(\sqrt{x(t-x)}) dx &= \sum_{k=0}^{\infty} \frac{(-1)^k}{2^{2k}(k!)^2} \int_0^t x^k (t-x)^k dx \\ &= \sum_{k=0}^{\infty} \frac{(-1)^k}{2^{2k}(k!)^2} t^{2k+1} B(k+1, k+1) \\ &= \sum_{k=0}^{\infty} \frac{(-1)^k}{2^{2k}(2k+1)!} t^{2k+1} = 2 \sin \frac{t}{2}. \end{aligned}$$

4. 有 $C_\nu(z)$ 与 $C_{\nu-1}(z)$ 之间的递推关系：

$$\frac{d}{dz}[z^\nu C_\nu(z)] = z^\nu C_{\nu-1}(z) \quad (4.1)$$

$$\frac{d}{dz}[z^{-\nu+1} C_{\nu-1}(z)] = -z^{-\nu+1} C_\nu(z) \quad (4.2)$$

令等式 (4.1) 两边同乘 $z^{-2\nu+1}$ 并求导数，代入式 (4.2) 得到

$$\frac{d}{dz} \left[z^{-2\nu+1} \frac{d}{dz} [z^\nu C_\nu(z)] \right] + z^{-\nu+1} C_\nu(z) = 0,$$

也可以写成标准的 Bessel 方程形式：

$$\frac{1}{z} \frac{d}{dz} \left[z \frac{dC_\nu(z)}{dz} \right] + \left(1 - \frac{\nu^2}{z^2} \right) C_\nu(z) = 0.$$

5. n 阶 Bessel 函数满足 Bessel 方程

$$\frac{1}{x} \frac{d}{dx} \left[x \frac{dJ_n(x)}{dx} \right] + \left(1 - \frac{n^2}{x^2} \right) J_n(x) = 0,$$

可以得到

$$\frac{n^2}{x} J_n(x) = \frac{d}{dx} \left[x \frac{dJ_n(x)}{dx} \right] + x J_n(x).$$

等式两边乘上 $J_m(x)$ 并积分得到

$$n^2 \int \frac{1}{x} J_n(x) J_m(x) dx = \int J_m(x) \frac{d}{dx} \left[x \frac{dJ_n(x)}{dx} \right] dx + \int x J_n(x) J_m(x) dx.$$

相应的，有

$$m^2 \int \frac{1}{x} J_n(x) J_m(x) dx = \int J_n(x) \frac{d}{dx} \left[x \frac{dJ_m(x)}{dx} \right] dx + \int x J_n(x) J_m(x) dx.$$

以上两式相减，得到

$$\begin{aligned}
 (m^2 - n^2) \int \frac{1}{x} J_n(x) J_m(x) dx &= \int J_n(x) \frac{d}{dx} \left[x \frac{dJ_m(x)}{dx} \right] dx - \int J_m(x) \frac{d}{dx} \left[x \frac{dJ_n(x)}{dx} \right] dx \\
 &= x J_n(x) J'_m(x) - x J'_n(x) J_m(x) \\
 &= \frac{x}{2} [J_m(x) J_{n+1}(x) - J_n(x) J_{m+1}(x)] + \frac{x}{2} [J_n(x) J_{m-1}(x) - J_m(x) J_{n-1}(x)] \\
 &= \frac{x}{2} [J_m(x) J_{n+1}(x) - J_n(x) J_{m+1}(x)] + \frac{x}{2} [J_n(x) J_{m-1}(x) + J_n(x) J_{m+1}(x) \\
 &\quad - J_n(x) J_{m+1}(x) + J_m(x) J_{n+1}(x) - J_m(x) J_{n+1}(x) - J_m(x) J_{n-1}(x)] \\
 &= x [J_m(x) J_{n+1}(x) - J_n(x) J_{m+1}(x)] + (m - n) J_m(x) J_n(x),
 \end{aligned}$$

即证得当 $m \neq n$ 时，

$$\int \frac{1}{x} J_n(x) J_m(x) dx = \frac{x}{m^2 - n^2} [J_m(x) J_{n+1}(x) - J_n(x) J_{m+1}(x)] + \frac{1}{m + n} J_m(x) J_n(x). \quad (5.1)$$

利用递推关系 $J_0(x) + J_2(x) = \frac{2}{x} J_1(x)$ ，原积分可化为

$$\int_0^\infty \frac{J_1^2(x)}{x^2} dx = \frac{1}{2} \int_0^\infty \frac{1}{x} J_0(x) J_1(x) dx + \frac{1}{2} \int_0^\infty \frac{1}{x} J_1(x) J_2(x) dx.$$

代入上面得到的公式 (5.1) 并利用 Bessel 函数在 $x \rightarrow 0$ 和 $x \rightarrow \infty$ 时的渐进性质

$$J_n(0) = 0, \quad J_n(x \rightarrow \infty) \sim \sqrt{\frac{2}{\pi x}} \cos\left(x - \frac{n\pi}{2} - \frac{\pi}{4}\right)$$

得到

$$\begin{aligned}
 \int_0^\infty \frac{1}{x} J_0(x) J_1(x) dx &= x [J_1^2(x) - J_0(x) J_2(x)]_0^\infty + J_0(x) J_1(x) \Big|_0^\infty \\
 &= \frac{2}{\pi} \left[\cos^2\left(x - \frac{\pi}{2} - \frac{\pi}{4}\right) - \cos\left(x - \frac{\pi}{4}\right) \cos\left(x - \pi - \frac{\pi}{4}\right) \right]_{x \rightarrow \infty} \\
 &\quad + \frac{2}{\pi x} \cos\left(x - \frac{\pi}{4}\right) \cos\left(x - \frac{\pi}{2} - \frac{\pi}{4}\right) \Big|_{x \rightarrow \infty} \\
 &= \frac{2}{\pi},
 \end{aligned}$$

以及

$$\begin{aligned}
 \int_0^{\infty} \frac{1}{x} J_1(x) J_2(x) \, dx &= \frac{x}{3} [J_2^2(x) - J_1(x) J_3(x)]_0^{\infty} + J_1(x) J_2(x) \Big|_0^{\infty} \\
 &= \frac{2}{3\pi} \left[\cos^2 \left(x - \pi - \frac{\pi}{4} \right) - \cos \left(x - \frac{\pi}{2} - \frac{\pi}{4} \right) \cos \left(x - \frac{3\pi}{2} - \frac{\pi}{4} \right) \right]_{x \rightarrow \infty} \\
 &\quad + \frac{2}{3\pi x} \cos \left(x - \frac{\pi}{2} - \frac{\pi}{4} \right) \cos \left(x - \pi - \frac{\pi}{4} \right) \Big|_{x \rightarrow \infty} \\
 &= \frac{2}{3\pi}.
 \end{aligned}$$

故计算得到原积分

$$\int_0^{\infty} \frac{J_1^2(x)}{x^2} \, dx = \frac{4}{3\pi}.$$
